SimpleMovieSearchEngine class

1. `findHighestRating(List<Movie> originalMovies, int numberOfMovies)` : To find the highest rating from all of the movies related to the number of the movies, for example, if `numberOfMovies` is 5, that means it will find Top 5 of rating in descending order. Then return a list of movies.

2. `findLowestRating(List<Movie> originalMovies, int numberOfMovies)` : To find the lowest rating from all of the movies related to the number of the movies, for example, if `numberOfMovies` is 5, that means it will find Top 5 of rating in ascending order. Then return a list of movies.

3. `findTagHighestRating(String tag)` : To sort the rating of each tag in descending order. First, find the movies related to the tag and then sort it by using `sortByRating` method. Return a list of movies.
